Description
Kemiko 100% Solids Self-Leveling Epoxy Clear Fast Cure (SS1202FF) is a two component, abrasion resistant epoxy coating that offers excellent adhesion to concrete. Benefits of the product include being user friendly, 0 VOC, self-leveling, minimal odor and cures to a very hard resilient high-gloss film. This product can be applied as a finish coat on most interior surfaces. Kemiko SS1202 is non-blushing in high humidity and cures overnight.

Applications
Kemiko SS1202FF can be applied to properly prepared Kemiko primers and color coats. Typical applications include hospital and food processing floors, petrochemical and chemical secondary containment, warehouse flooring, showroom floors, concrete countertops and many other surfaces that require excellent physical and chemical properties. This product is not intended for direct UV exposure.

Surface Preparation
Concrete
Surface must be cured, dry and free from stains and laitance. All visible oil, grease or any other contaminants must be removed prior to application of coating. Surface preparation includes using concrete grinding and shot blasting to achieve a surface profile of CSP 3-5. The concrete should have a slight texture for the coating to achieve proper penetration and adhesion. Clean surface and ensure that all contaminants, dust, and debris have been removed. Check concrete preparation by applying water over a small area of the concrete surface. The concrete should have a slight texture for the coating to achieve proper penetration and adhesion. Clean surface and ensure that all contaminants, dust, and debris have been removed. Check concrete preparation by applying water over a small area of the concrete surface. If water beads on the surface, additional surface preparation is needed. If concrete darkens with no water beading on the surface, then the surface is ready to be coated.

Existing Coatings
Surface must be cured, dry and free from stains and laitance. All visible oil, grease or any other contaminants must be removed prior to application of coating. For best adhesion, the existing coating must be scuffed with a nonwoven abrasive pad, floor buffer with abrasive screen, or orbital sander with sandpaper (80-120 grit) to achieve a rough surface profile. Clean area and wipe existing coating with a rag and acetone or a chemical cleaner to remove contaminants from the surface. All visible oil, grease or any other contaminants have been successfully removed. If existing coating is not a Kemiko product, consult with a Kemiko representative prior to application.

Warning: Wear a NIOSH approved respirator to control toxin exposure. Scraping, sanding or removing old paint may release toxic lead dust. Exposure may lead to serious illness, such as brain damage, especially in children. Pregnant women should avoid exposure. Clean up carefully with a HEPA vacuum and a wet mop.

Mixing Instructions
SS1202FF is packaged in such a way that a separate container is not needed for mixing. Using a mechanical jiffy-type mixer, blend SS1202FF Part A Resin component at slow speed (500-1000rpm) for 1-2 minutes until a homogenous mixture is achieved. Next, pour SS1202FF Part B Hardener component into the previously mixed Part A component. Ensure that all contents have been transferred. Mix on slow to medium speed (500-1000rpm) for 1-2 minutes. Avoid fast, aggressive mixing as that may entrap air bubbles into the system. Scrape sides of container and then mix for an additional 1-2 minutes, ensuring material is thoroughly blended.

Mixing Tips
- Do not mix product by hand; only use a mechanical mixer. Hand mixing does not properly incorporate the components.
- For best results, prior to mixing, have material as close as possible to an ambient temperature of 77°F (25°C).
Application Bulletin
Kemiko® 100% Solids
Self-Leveling Epoxy Clear Fast Cure (SS1202FF)

Application Methods
This product can be applied using one of the methods outlined below. Tape off any area that does not require coating. Pour contents in “ribbons” or “strips” across the surface to be coated. Spread material out with a brush or roller to the recommended wet film thickness. A second coat can be applied up to 24 hours after the first coat has reached a dry to touch state. Do not thin material.
- **Brush** Use high quality bristle brush for best film properties
- **Roller** Use lambswool or similar cover with phenolic core, 3/8 – 1/2” (9.5-12.7mm) nap. De-lint roller prior to use
- **Squeegee** Use appropriate notched squeegee
- **Spray** Use appropriate notched squeegee

Environmental Conditions
For best results, apply when surface temperature is between 50ºF - 85ºF (10ºC-29ºC) and 5ºF (3ºC) above dew point. Avoid using in direct sunlight. Do not apply on rainy or foggy days.

Clean Up
Use Acetone, Denatured Alcohol, or MEK to clean tools.

Storage Conditions
Store between 40ºF-100ºF (4.4ºC-37.8ºC). Keep in a cool, well-ventilated area, away from direct sunlight and heat. Store in a segregated and safe area, avoiding all possible sources of ignition.

Safety
Care should be taken when using this product. During application, use protective eye wear, proper respirator, and protective gloves. Ensure work spaces are well ventilated. Read product label and SDS carefully for more detailed safety information prior to handling or use.

Disclaimer
*Information provided in this application bulletin is based on laboratory testing under ambient conditions and is used as a guideline only.*

Warranty
The following warranty is made in lieu of all other warranties, either expressed or implied. This product is manufactured from selected raw materials by skilled technicians. Neither seller nor manufacturer has any knowledge or control concerning the purchaser’s use of this product and no warranty is made as to the results of any use. The only obligation of either seller or manufacturer shall be to replace any quantity of this product that is proved to be defective. Any claim of defective product must be received in writing within one (1) year from date of shipment. Neither seller nor manufacturer assumes any liability for injury, loss or damage resulting from use of this product.
